TYPE AND CATEGORY OF THE SCHEME

KIM of Motilal Oswal M50 ETF (MOFM50)

Name of the Scheme	Motilal Oswal M50 ETF (MOFM50)
Type of the Scheme	An open ended scheme replicating/ tracking Nifty 50 Index
Category of Scheme	ETF

INVESTMENT OBJECTIVE

The Scheme seeks investment return that corresponds (before fees and expenses) generally to the performance of the Nifty 50 Index (Underlying Index), subject to tracking error.

However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.

ASSET ALLOCATION

Instruments	Indicative allocations (% of total assets)		Risk Profile
	Minimum	Maximum	High/Medium/Low
Securities constituting Nifty 50 Index	95	100	Medium to High
Debt and Money market instruments and cash at call	0	5	Low to Medium

The Scheme may take an exposure to equity derivatives of constituents of the Underlying Index for short duration when securities of the Index are unavailable, insufficient or for rebalancing at the time of change in Index or in case of corporate actions. When constituent securities of underlying Index are available again, derivative positions in these securities would be unwound. The total exposure to derivatives would be restricted to 10% of the net assets of the Scheme. The margin paid for derivative instruments will form part of Debt and Money market Instruments.

INVESTMENT STRATEGY

The Scheme employs an investment approach designed to track the performance of Nifty 50 Index. The Scheme seeks to achieve this goal by investing in securities constituting the Nifty 50 Index in same proportion as in the Index. The Scheme will invest at least 95% of its total assets in the securities comprising the Underlying Index. The Scheme may also invest in debt and money market instruments to meet the liquidity and expense requirements. The Scheme may also take exposure in derivative instruments when securities of the Index are unavailable, insufficient or for rebalancing at the time of change in Index or in case of corporate actions, for a short period of time in order to minimize the tracking error.

Tracking Error

The AMC monitors the tracking error of the Scheme on an ongoing basis and seeks to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2% p.a. However, in case of events like, dividend issuance by constituent members, rights issuance by constituent members, and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Index, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying Index.

RISK PROFILE OF THE SCHEME

Trading in the units of the Scheme may be halted due to market conditions or for reasons that in the view of the Exchange Authorities or SEBI. 4. Investors should note that even though the Scheme is an open ended Scheme, Subscription/redemptions directly with the Fund is limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific lot sizes.
5. Tracking error have an impact on the performance of the Scheme which may arise due to various reasons like fees and expenses charged to the Scheme, dividend received, corporate actions, change in the Underlying Index, etc.
6. **Risks of Total Return:**
 - Dividends are assumed to be invested into the Nifty 50 Index 45 days after the ex-dividend date of the constituents. However in practice, the dividend is received with a lag. This can lead to some tracking error.
7. **Risk associated with Investing in Derivatives:**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor.

The units of the Scheme are listed on National Stock Exchange Limited (NSE).

METHODOLOGY AND ILLUSTRATION OF SALE AND REPURCHASE OF UNITS

a) Methodology of calculating sale price

The price or NAV, an investor is charged while investing in an open-ended scheme is called sale or subscription price. Pursuant to SEBI Circular dated June 30, 2009, no entry load will be charged by the scheme to the investors. Therefore, Sale or Subscription price = Applicable NAV (for respective plan and option of the scheme)

Example: An investor invests Rs.10,000/- and the current NAV is Rs. 10/- then the purchase price will be Rs.10/- and the investor receives $10,000/10 = 1000$ units.

b) Methodology of calculating repurchase price of Units

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price. Therefore, Repurchase or Redemption Price = Applicable NAV *(1- Exit Load, if any)

Example: If the Applicable NAV is Rs. 10 and a 2% Exit Load is charged, the Redemption Price per Unit will be calculated as follows: = Rs. 10 * (1-0.02) = Rs. 10 * (0.98) = Rs. 9.80.
