Risk Mitigation and Portfolio Diversification:

The Nifty Midcap 100 Index consists of 100 midcap constituents and uses free float market capitalization method to allocate capital. This ensures that the index is well diversified. Free float based capital allocation ensures that due consideration is given to liquidity of underlying constituents. Currently the highest capital allocation made in the index is less than 4%.

Trading in the units of the Scheme may be halted due to market conditions or for reasons that in the view of the Exchange Authorities or SEBI. Units of the Scheme may trade at prices which can be above or below its NAV.
4. Investors should note that even though the Scheme is an open ended Scheme, Subscription/redemptions directly with the Fund is limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific lot sizes.
5. Tracking error have an impact on the performance of the Scheme which may arise due to various reasons like fees and expenses charged to the Scheme, dividend received, corporate actions, change in the Underlying Index, etc.
6. Risks of investing in the Midcap sector
 - Given the lower liquidity in small cap equity shares, achieving the investment objectives may be affected.
 - The companies, being smaller in size, are more prone to adverse effects of prolonged general economy wide adversity such as a slow down or recession.
7. Risks associated with Segregated portfolio

The AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event/actual default at issuer level. Accordingly, Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. The Security comprised of segregated portfolio may not realise any value. Further, Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

• **Risks associated with Stock Lending**

Stock Lending is a lending of securities through an SEBI approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

In case the Scheme undertakes stock lending as prescribed in the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from

the securities lent. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Trading through mutual fund trading platforms of BSE and/ or NSE**

In respect of transaction in Units of the Scheme through BSE and/ or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/ or NSE and their respective clearing corporations on which the Mutual Fund has no control.

- **Risk associated with potential change in Tax structure**

This information is provided for general purpose only. The current taxation laws may change due to change in the 'Income Tax Act 1961' or any subsequent changes/amendments in Finance Act/Rules/Regulations. METHODOLOGY AND ILLUSTRATION OF SALE AND REPURCHASE OF UNITS

a) Methodology of calculating sale price

The price or NAV, an investor is charged while investing in an open-ended scheme is called sale or subscription price. Pursuant to SEBI Circular dated June 30, 2009, no entry load will be charged by

KIM of Motilal Oswal Midcap 100 ETF (MOFM100)

the scheme to the investors. Therefore, Sale or Subscription price = Applicable NAV (for respective plan and option of the scheme)

Pursuant to SEBI Circular No. SEBI/IMD/DF2/OW/P/2020/11099/1 dated June 29, 2020, Gazette notification dated March 30, 2020 for extending the effective date for applicability of new stamp duty rules and as per Notification No. S.O. 4419(E) dated December 10, 2019 issued by Department of Revenue, Ministry of Finance, Government of India, read with Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019, a stamp duty @ 0.005% of the transaction value would be levied on all mutual fund inflow transactions i.e. purchases (including Switch-ins), SIP / STP instalments (including IDCW reinvestment) with effect from July 01, 2020. Accordingly, pursuant to levy of stamp duty, the number of units allotted to the unit holders would be lower to that extent. Kindly refer the example below for better understanding.

Example: An investor invests Rs.10,000/- and the current NAV is Rs. 10/- then the purchase price will be Rs.10/-. After deduction of stamp duty investor will receive 999.95 units

Investment amount	Rs.10,000/-	A
Less: Transaction charges (deducted and paid to distributor, if applicable)	NIL	B
Stamp duty applicable (@0.005%)	0.50	$C = (A - B) * 0.005 / 100.005$
Net Investment amount	9,999.50/-	$D = (A - B - C)$
NAV	Rs.10/-	E
Units allotted	999.95	$F = D / E$

b) Methodology of calculating repurchase price of Units

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the “Applicable NAV” to calculate the repurchase price. Therefore, Repurchase or Redemption Price = Applicable NAV *(1- Exit Load, if any)

Example: If the Applicable NAV is Rs. 10 and a 2% Exit Load is charged, the Redemption Price per Unit will be calculated as follows: = Rs. 10 * (1-0.02) = Rs. 10 * (0.98) = Rs. 9.80.

The dividend would be paid to the Unitholders whose names appear in the Register of Unitholders as on the record date.

Pursuant to SEBI Circular dated October 05, 2020, Dividend distribution procedure has been modified stating that when units are sold, and sale price (NAV) is higher than face value of the unit, a portion of sale price that represents realized gains is credited to an Equalization Reserve Account and which can be used to pay dividend. Dividend can be distributed out of investor's capital (Equalization Reserve), which is part of sale price that represents realized gains.

There is no assurance or guarantee to the Unitholders as to the rate of dividend nor that the dividend would be paid regularly. If the Fund declares dividend, the NAV will stand reduced by the amount of dividend and dividend distribution tax (if applicable) paid.
