**INVESTMENT OBJECTIVE**

However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.

**ASSET ALLOCATION**

<b>Instruments</b>	<b>Indicative allocations (% of total assets)</b>		<b>Risk Profile</b>
	<b>Minimum</b>	<b>Maximum</b>	<b>High/Medium/Low</b>
Securities constituting Nifty Free Float Midcap 100 Index	95	100	Medium to High

The total exposure to derivatives would be restricted to 10% of the net assets of the Scheme. The combined exposure of equity shares, debt instruments and gross notional exposure of derivative instruments shall not exceed 100% of the net assets of the Scheme.

**INVESTMENT STRATEGY**

The Scheme employs an investment approach designed to track the performance of Nifty Midcap 100 Index. The Scheme seeks to achieve this goal by investing in securities constituting the Nifty Midcap 100 Index in same proportion as in the Index. The Scheme will invest at least 95% of its total assets in the securities comprising the Underlying Index. The Scheme may also invest in debt and money market instruments to meet the liquidity and expense requirements. The Scheme may also take exposure in derivative instruments for short duration when securities of the Underlying Index are not readily available in needed quantities within the required time frame, or for rebalancing at the time of change in Underlying Index or in case of corporate actions.

**Risk Mitigation and Portfolio Diversification:**

The Nifty Midcap 100 Index consists of 100 midcap constituents and uses free float market capitalization method to allocate capital. This ensures that the index is well diversified. Free float based capital allocation ensures that due consideration is given to liquidity of underlying constituents. Currently the highest capital allocation made in the index is less than 4%.

## LISTING

The units of the Scheme are listed on National Stock Exchange Limited (NSE) and BSE Limited (BSE).

## METHODOLOGY AND ILLUSTRATION OF SALE AND REPURCHASE OF UNITS

### a) Methodology of calculating sale price

The price or NAV, an investor is charged while investing in an open-ended scheme is called sale or subscription price. Pursuant to SEBI Circular dated June 30, 2009, no entry load will be charged by the scheme to the investors. Therefore, Sale or Subscription price = Applicable NAV (for respective plan and option of the scheme)

Example: An investor invests Rs.10,000/- and the current NAV is Rs. 10/- then the purchase price will be Rs.10/- and the investor receives  $10,000/10 = 1000$  units.

### b) Methodology of calculating repurchase price of Units

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price. Therefore, Repurchase or Redemption Price = Applicable NAV \*(1- Exit Load, if any)

Example: If the Applicable NAV is Rs. 10 and a 2% Exit Load is charged, the Redemption Price per Unit will be calculated as follows: = Rs. 10 \* (1-0.02) = Rs. 10 \* (0.98) = Rs. 9.80.
