- For any given 5 year period, maximum wealth is created when a small cap company becomes mid/ large cap and a mid cap company becomes a large cap
- If one invests in midcaps, the probability that a midcap will remain or become large cap in 5 years and reward investors, is as high as ~50%
- In any 5 year cycle when this plays out, there are 2-3 terrible years and 2-3 great years. 2000-2003 were very bad followed by 2004-05, 2005-07 were great followed by 2008-09, 2010-13 were terrible followed by 2014-15
- Investing is probabilistic, there will always be one or two calls that go wrong: one must look at the overall portfolio or bouquet held
- One must look to understand and improve probabilities of success as a stock picker by applying appropriate quality (Q), growth (G) and longevity (L) filters.
- It is estimated that if investors invest for 5 years in midcaps and the higher market cap ranges of small caps, they can make outsized returns

Investment Philosophy

At Motilal Oswal Asset Management Company (MOAMC), our investment philosophy is centered on 'Buy Right: Sit Tight' principle.

Buy Right

- **'Q'uality** denotes quality of the business and management
- **'G'rowth** denotes growth in earnings and sustained RoE
- **'L'ongevity** denotes longevity of the competitive advantage or economic moat of the business
- **'P'rice** denotes our approach of buying a good business for a fair price rather than buying a fair business for a good price

Sit Tight

- **Buy and Hold:** We are strictly buy and hold investors and believe that picking the right business needs skill and holding onto these businesses to enable our investors to benefit from the entire growth cycle needs even more skill.
- **Focus:** Our portfolios are high conviction portfolios with 20 to 25 stocks being our ideal number. We believe in adequate diversification but over-diversification results in diluting returns for our investors and adding market risk
