CEO

“It is the nature of the markets to think up of new worries. We need to ensure we are always with the strong hands and we don't react to market worries which may not be relevant to our long term goals of wealth creation.”

“So what are the latest worries? Many – but mainly around oil prices, state and general elections, the global scenario and FII selling and last but not the least regulatory changes in fund classification.”

Dear Investors and my dear Advisor Friends,

Half of 2018 is over and I can't help but point out that 2017 and 2018 have been years in contrast. When 2017 started investors and market participants alike were worried about the after effects of demonetization. Worries continued to mount throughout 2017 with demonetization followed by implementation of real estate regulation followed by implementation of GST effective July 1, 2017.

Each of these path breaking reforms was initially expected to have severe adverse effects on economic performance and hence corporate performance and equity markets. Despite these concerns markets continued to climb. As I have pointed out before 2017 was an unprecedented year with Nifty climbing ~28%, Nifty Midcap ~48% and BSE Smallcap ~57% in the calendar year 2017. Clearly in hindsight this was baffling performance by the markets, there is a popular adage of markets climbing a wall of worries while 2017 was clearly about markets pole vaulting a wall of worries; by a margin.

Coming to 2018, in the recently released commentary of the monetary policy the RBI stated that GDP growth was at a seven quarter high of 7.1% for the January – March 2018 quarter. There is pickup in manufacturing activity as manifested in capacity utilization trends and growth in capital formation. Credit off take from banks is on the rise and services growth is also showing traction. Indicators like corporate profit to GDP have clearly bottomed out if one sees the corporate results as at quarter ended March 2018. The ratio peaked out at around 7% in 2007 and last year we saw a ratio below 3%. As at end March 2018 we are seeing a ratio over 3% which is seen as a reversal of trend. GST collections, direct tax collections, tax assessees for income tax and GST registrations all are starting to look better. Slowly but surely most of the concerns of 2017 are being addressed as economic data have started to look up. The most drastic of prognosis post demonetisation was about the economy coming to a grinding halt and slipping into recession. Here we are in 2018 witnessing multi year highs in growth of FMCG, white goods, consumer and retail companies.

In 2017 the market had many reasons to worry but they raced up in an unprecedented fashion. In 2018 the markets' worries are being addressed convincingly but the markets have seen a significant decline especially when it comes to small and midcap stocks. It is the nature of the markets to think up of new worries. Just to remind you there was a time when markets were pre-occupied with US slipping back into recession, China having a crash landing, Spain, Italy and Portugal defaulting and basically every once in a decade we are led to believe that the world will come to an end. And if there were no such instances how would we ever make a return. It is these very reasons which cause volatility in the markets and they provide opportunity for shares to exchange hands from weak hands into stronger hands that hold on for the longer term with much deeper conviction. We need to ensure we are always with the strong hands and we don't react to market worries which may not be relevant to our long term goals of wealth creation. We will explore all the reasons for worry in the current market scenario but it is worth noting that last year everyone was witnessing great past returns while they were worried about valuations, we are now getting to a scenario where past returns may no longer look as handsome (they are still in double digits in many cases) but valuations will start looking attractive anytime now. That's how markets are, either valuations are good to buy or past returns look great, one can't seem to have both together.

So what are the latest worries? Many – but mainly around oil prices, state and general elections, the global scenario and FII selling and last but not the least regulatory changes in fund classification and

“The fact is that FIIs have net sold about a \$1 bn in India since 2018 began. That's not a significant number by any stroke of imagination. Yes, there has been more selling in the bond market which has resulted in impact on bond yields and the currency, but the impact on equity markets thus far seems exaggerated.”

“On a back of envelope or macro basis one can imagine that in the last one year there must be many stocks that have indeed shown a 15-25% growth in their profits and yet their share prices have declined by anywhere between 10 to 50% in a span of last 4-5 months. This cannot continue for long and eventually one is bound to see value emerging in this space.”

hence portfolio actions of domestic mutual funds. A lot of these factors are beyond accurate prediction. But I will make an attempt to share perspective.

The last time around that oil prices were well over a \$100 a barrel for extend periods of time was in 2008 where we saw around \$145 at the peak. This kind of prolonged above \$100 regime must have greatly benefited the oil producing nations but all the same it does result in backfiring in the form of economic slowdowns and demand destruction, heavy investment into capacity creation and alternatives like US shale oil, alternative fuel like wind energy, solar etc. and increased thrust on EVs. While enjoying the oil prices at a particular time, there is a price to pay for the subsequent years to come. We saw \$145 in 2008 and then we saw \$28 in 2016. Having oil prices at either extremes or the associated collateral damage doesn't suit producers as well as consumers and hence one can expect sense to prevail with a reasonable range of movement for oil prices.

There is a lot of talk of global market volatility led by occurrences in the US economy and their trade war with rest of the world. Lot of discussion around FII selling in the Indian markets and fears around the same. The fact is that FIIs have net sold about a \$1 bn in India since 2018 began. That's not a significant number by any stroke of imagination. Yes, there has been more selling in the bond market which has resulted in impact on bond yields and the currency, but the impact on equity markets thus far seems exaggerated. If one looks at behaviour of the large cap index and large companies there doesn't seem to be any sign of significant FII selling. In my experience India is not just another emerging market. Emerging markets are also of varied hues – some like Brazil and Russia that are heavily depending on commodities, some like Korea, Vietnam, Philippines, Malaysia, etc. that are dependent on exports whereas India is over 60% dependent on domestic consumption with commodities or exports being a much smaller proportion of GDP. Any turbulence in global markets definitely affects India but it is usually flow related impact causing volatility rather than more fundamental long term economic impact. Whenever in the past FII flows have become negative or caused selling, in hindsight it has always turned out to be a great opportunity to buy.

In fact the route in small and midcaps seems to suggest something totally different. It is more likely to be domestic mutual funds rejigging their portfolios to comply with new regulations on classification of funds and domestic retail investors taking gains (if any are left by now) off the table post last 2 years' and more specifically CY2017 mammoth gains in this space. The regulator has recently directed mutual funds to strictly classify large cap as stock no 1 – 100 by rank of market capitalization, mid cap as stock no 101 – 250 by rank of market capitalization and 251 onwards as small cap. This should have resulted in a near vacating of the small cap space except for a handful of dedicated small cap funds and some percentage exposure of largecap, midcap or multicap funds which is still allowed to remain in small caps. In the past it was possible for mutual funds to stray in their exposures but this is now no longer possible. These changes coupled with the huge gains of last year have taken a toll on small caps that are owned by mutual funds. On a back of envelope or macro basis one can imagine that in the last one year there must be many stocks that have indeed shown a 15-25% growth in their profits and yet their share prices have declined by anywhere between 10 to 50% in a span of last 4-5 months. This cannot continue for long and eventually one is bound to see value emerging in this space.

Our mutual fund portfolios remain unimpacted and in fact our MidCap Fund (MOF30) performance has gained significantly as a result of change in regulation because our fund definition was stricter than the new norm – what is serving the industry as a restriction, in our case it has turned out to be a relaxation. Our MidCap approval was for midcap to be defined as stock no 101 to 200 with 75% portfolio exposure in the said bucket. The new norms define midcap as stock no 101 to 250 with only 65% exposure in the said bucket. We are now in a more relaxed regime and further will see more fair comparisons from here on.

“...we do believe that market likes continuity and dislikes uncertainty. To that extent there could be turbulence and volatility with expectations being tested with every state election result and in the run up to the general election.”

“I am reminding you of the larger picture because I am seeing signs of investors being caught up with what has happened in the last 3-4 months. Eventually it will tantamount to missing the wood for the trees.”

“This is precisely the day for which SIPs were registered; please do not start thinking that now SIPs are not working. Let me tell you in no uncertain terms, last year each successive month when the NAV went up and your SIP got in at progressively higher levels, that’s when your SIP wasn’t working for you, this year when the NAVs have been lower is when your SIP is really working for you. This is the time to increase the SIP commitment, not to lose faith in it.”

Politics again is even harder to predict. As I had written earlier (<https://www.motilaloswalmf.com/blogs/ceo-speak/returns-backed-by-strong-fundamentals-can-only-be-delayed-they-can-never-be-denied/88>), we do believe that market likes continuity and dislikes uncertainty. To that extent there could be turbulence and volatility with expectations being tested with every state election result and in the run up to the general election. Having said so, there is more than enough evidence which proves that for stock markets and economic performance it is what the previous regime did that matters more than what the current regime does. We have just about started to witness the positive impact of what the Government has executed in the last 2-3 years and this trajectory is likely to continue well into the future before ill effects of any future governance mishaps begin to show up. Global integration of our economic and capital markets has further meant that there is a narrow channel of tolerance for movement of macroeconomic variables and policy directions albeit being stop-start in nature, are usually not prone to u-turns or disruptive discontinuity.

These are the times when a roll up from being too close to the ground to a slightly higher perch helps. I was recently at a conference in Europe where in the opening plenary session a wealth manager from the advanced world made a long presentation on how growth was hard to come by and how a judicious mix of private equity in some countries, commercial real estate in some countries, emerging market equity and commodity exposures could create a portfolio that yielded potentially just 3-4%. That made me think what kind of businesses one would need to buy in the western world if one wanted 15-20% sustained earnings growth and what kind of businesses we buy to create portfolios with 15-20% earnings growth. It's a matter of time that on risk adjusted basis, India will start looking like a very bankable proposition to these investors. Headwinds and tailwinds are part and parcel of market participation but we are likely to see greater than ever investor interest in the years to come. I had the opportunity to meet many investors who keep India on their radar in the pursuit of growth and are just looking out for trust worthy managers to be able to guide them into India. Up until recently India was a part of some grouping like BRICS, Asia ex Japan, GEMS, Asia, etc. and hence we received some exposure in these global funds. With \$2.5 tn GDP, a market of 1.3 bn people, \$2000 per capita income, there will be a time in the near future where we will be suitable for many to consider a single country dedicated equity exposure. This is bound to happen as wealth owners in the western world seek sustainable growth which most parts of their world will fail to offer and as they notice that some large global corporations also derive bulk of their growth from markets like India. I am reminding you of the larger picture because I am seeing signs of investors being caught up with what has happened in the last 3-4 months. Eventually it will tantamount to missing the wood for the trees.

If you haven't taken some money off the table in January as suggested in my earlier letter (<https://www.motilaloswalmf.com/blogs/ceo-speak/in-your-shoes/79>), I can imagine your feelings today but this is clearly not the time to act. This is the time to review and reassess the situation and renew commitment to equity participation for future gains. This is precisely the day for which SIPs were registered; please do not start thinking that now SIPs are not working. Let me tell you in no uncertain terms, last year each successive month when the NAV went up and your SIP got in at progressively higher levels, that’s when your SIP wasn’t working for you, this year when the NAVs have been lower is when your SIP is really working for you. This is the time to increase the SIP commitment, not to lose faith in it.

Lastly, keep expectations realistic, we get many a communication where our investors are dissatisfied with mid-teens returns just because in the past they have seen a quarter century or upwards.

“If someone has invested in the last 12 months, the returns are clearly not front ended but eventually for any 5 years holding period one will catch up with the averages with returns improving and catching up going forward.”

Low to mid-teens is the right expectation to have. If there are periods when you returns come front ended and you get higher than anticipated returns, there will be time when returns will come back ended and bring the average closer to the portfolio growth. Returns are mean-reverting – in both directions. If one had invested 2-3 years back, it looked like the returns were front ended. If someone has invested in the last 12 months, the returns are clearly not front ended but eventually for any 5 years holding period one will catch up with the averages with returns improving and catching up going forward.

Yours Sincerely,

Aashish P Somaiyaa
CEO

Motilal Oswal Focused 25 Fund (MOF25)

(An open ended equity scheme investing in maximum 25 stocks intending to focus on Large Cap stocks)

Investment Objective

The investment objective of the Scheme is to achieve long term capital appreciation by investing in up to 25 companies with long term sustainable competitive advantage and growth potential. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.

Category

Focused Fund intending to invest in large cap stocks

Benchmark

Nifty 50 TRI

Continuous Offer

Minimum Application Amount : ₹5,000/- and in multiples of ₹1/- thereafter.

Additional Application Amount : ₹1,000/- and in multiples of ₹1/- thereafter.

Redemption proceeds

Normally within 3 Business days from acceptance of redemption request.

Entry / Exit Load

Entry Load: Nil

Exit Load: 1% - If redeemed on or before 1 year from the date of allotment; Nil - If redeemed after 1 year from the date of allotment

No Exit Load applies for switch between MOF25, MOF30, MOF35 & MOFDYNAMIC. No Load for switch between Options within the Scheme. Investors have option to withdraw up to 12% p.a. of original investment cost (OIC) within 1 year (from date of investment) with no exit load. If the withdrawal amount is beyond 12% p.a. of OIC, the normal exit load applies on the amount greater than 12% p.a.

Date of Allotment

BUY RIGHT : SIT TIGHT

Buying quality companies and riding their growth cycle

At Motilal Oswal Asset Management Company, our investment philosophy is centered on two critical pillars of equity investing – 'Buy Right: Sit Tight'. 'Buy Right' means buying quality companies at a reasonable price and 'Sit Tight' means staying invested in them for a longer time to realise the full growth potential of the stocks.

It is a known fact that good quality companies are in business for decades but views about these companies change every year, every quarter, every month and sometimes every day! While many of you get the first part of identifying good quality stocks, most don't stay invested for a long enough time. The temptation to book profits at 25% or 50% or even 100% returns in a 1 to 3 year period is so natural that you miss out on the chance of generating substantial wealth that typically happens over the long term; say a 10 year period.

'Buy Right' Stocks Characteristics

QGLP

- **'Q'uality** - quality of the business and management
- **'G'rowth** - growth in earnings and sustained Return on Equity
- **'L'ongevity** - longevity of the competitive advantage or economic moat of the business
- **'P'rice** - our approach of buying a good business for a fair price rather than buying a fair business for a good price

Sit Tight Approach

- **Buy and Hold:** We are strictly buy and hold investors and believe that picking the right business needs skill and holding onto these businesses to enable our investors to benefit from the entire growth cycle, needs even more skill.
- **Focus:** Our portfolios are high conviction portfolios with 20 to 25 stocks being our ideal number. We believe in adequate diversification but over-diversification results in diluting returns for our investors and adding market risk.

This Buy Right : Sit Tight philosophy manifests itself in all the products in our Portfolio Management and Equity Mutual Fund schemes
