

— Introducing: Motilal Oswal Asset Allocation Passive Fund of Funds

What is Asset Allocation?

*The goal of **Asset Allocation** is to reduce risk through diversification by combining exposures to a variety of investments that have historically performed differently during various market conditions*

Different types of Asset Allocation –

- **Strategic allocation** is long term asset allocation which is in line with the investor's risk profile and financial goals
- **Tactical Asset Allocation** is a deviation from this long term allocation. And it is more in sync with the external factors including market timing.

Growth of ₹1,00,000 invested on 01-Jan-2007 (13+ years)

	Total Investment	Portfolio Value (31-Oct-2020)	Annualised Return (CAGR)
Chasing the Winners: (Investing in last year's best performing asset class)	₹1,00,000	₹2,85,639	7.9%
Bottom Fishing: (Investing in last year's worst performing asset class)	₹1,00,000	₹3,95,980	10.5%
Equal Weighted: (Investing consistently across the 4 asset classes in equal proportions)	₹1,00,000	₹4,98,470	12.3%

The 4 Asset Classes chosen for this analysis were Indian Equity (Nifty 500 TRI), US Equity (S&P 500 TRI-INR), Debt (5-yr G-sec) and Gold (INR). Best/Worst performing asset class identified basis last calendar year performance (refer to slide 16)

Source/Disclaimer: MOAMC Research, S&P Dow Jones and MOAMC for S&P 500 TRI, www.niftyindices.com for Nifty 500 TRI and 5-yr G-sec, Factset for Gold. All performance data in INR. Data from 01-Jan-2006 to 31-Oct-2020. Hypothetical performance results have many inherent limitations and no representation is being made that any investor will, or is likely to achieve, performance similar to that shown. The above table is used to explain the concept and is for illustration purpose only and should not used for development or implementation of an investment strategy. Past performance may or may not be sustained in future.

Importance of asset allocation

■ Asset Allocation ■ Security Selection
■ Market Timing ■ Other Factors

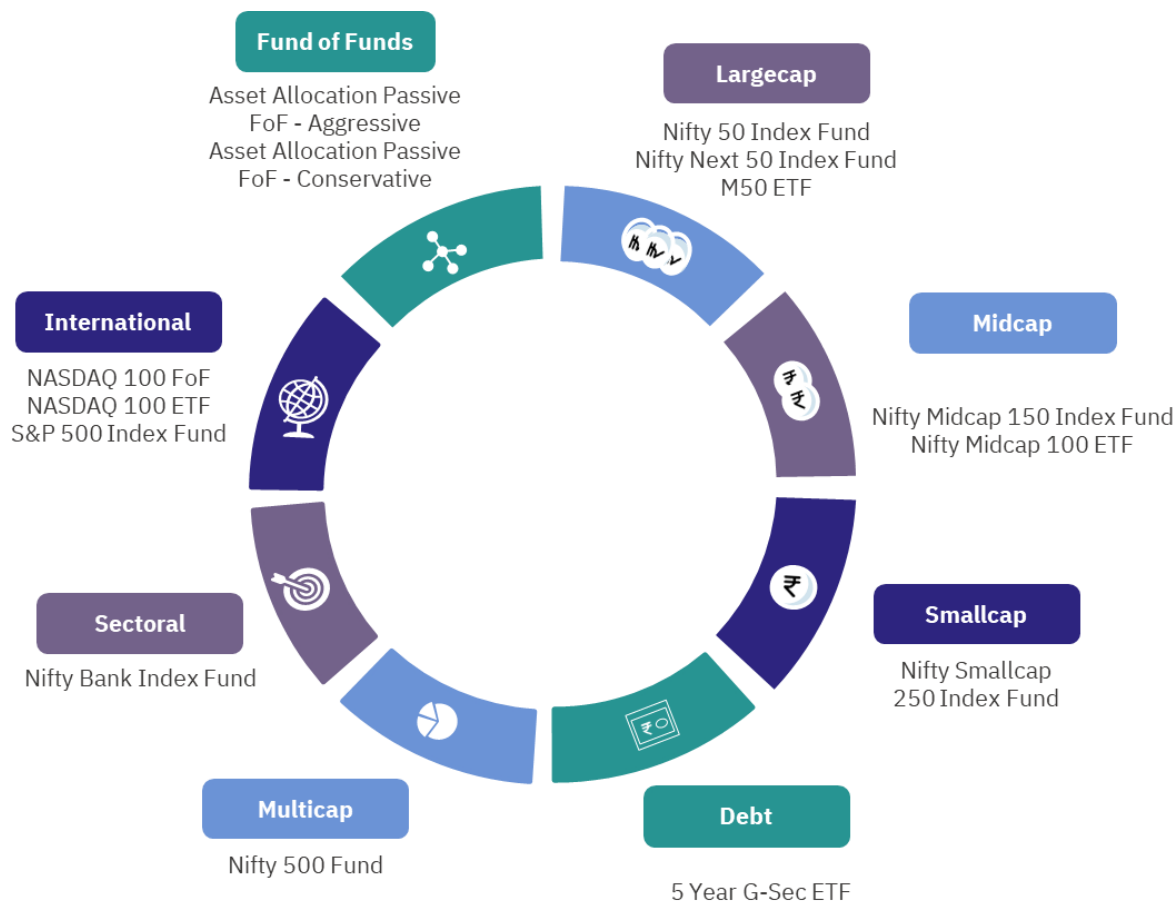

Factors such as, market timing & security selection are considered to have a relatively small impact on long term investment results

Generally significant percentage of volatility of investment performance is driven by asset allocation decisions

Two New Fund Offers

Methodology

Asset Classes Included –

Asset Class	Indicative Fund Name	Underlying Benchmark
Equity	Motilal Oswal Nifty 500 Fund	Nifty 500 TR Index
International Equity	Motilal Oswal S&P 500 Index Fund	^S&P 500 TR Index (INR)
Fixed Income	Motilal Oswal 5 Year G-Sec ETF	Nifty 5 Yr Benchmark G-Sec Index
Commodity	ICICI Prudential Gold ETF	Gold Price from FactSet* in INR

Asset Allocation – Strategic Asset Allocation

Rebalancing – Quarterly[#]

[#]If absolute change in weight greater than 5%

Source/Disclaimer: Note – Underlying indices used to for hypothetical study with no adjustment for cost; ^ denotes underlying index values are converted to INR using Forex Rate, * Gold prices are taken from FactSet; The above table is used to explain the concept and is for illustration purpose only and should not used for development or implementation of an investment strategy.

Why Each Asset Class?

Domestic Equity - Nifty 500

- Fastest growing large emerging economy
- Broadest coverage of entire listed market
- Diversified across sectors and industries

Fixed Income - 5 Yr G Sec

- Brings in portfolio stability
- Capital Preservation and Steady Income
- Practically 'Nil' credit risk

International Equity - S&P 500

- Access to world's largest GDP
- Exposure to Global brands
- Captures dollar appreciation vs INR

Commodity - Gold

- Safe Haven asset class held by global Central Banks
- Negative correlation
- Hedge against inflation

Asset Allocation – Motilal Oswal Asset Allocation Passive FoF- Aggressive (As per SID)

	Type of Instruments	Minimum Allocation (% of total assets)	Maximum Allocations (% of total assets)	Risk Profile
A	Units of specified schemes of Mutual Fund*	95	100	Medium to High
B	Units of Liquid schemes/Money Market Instruments	0	5	Low to Medium

	Type of Instruments	Minimum Allocation (% of total assets)	Maximum Allocations (% of total assets)	Risk Profile
A1	<u>Domestic Equity</u> – Motilal Oswal Nifty 500 Fund / Motilal Oswal M50 ETF / Similar Domestic Equity Passive Funds	40	90	High
A2	<u>International Equity</u> – Motilal Oswal S&P 500 Index Fund / Motilal Oswal NASDAQ 100 ETF	10	30	High
A3	<u>Debt</u> – Motilal Oswal 5 Year G – Sec ETF / Similar Domestic G-Sec Passive Funds	0	40	Low to Medium
A4	<u>Commodity</u> – ICICI Prudential Gold ETF / Similar Domestic Gold Exchange Traded Funds	0	20	Medium

Weight Movement: Aggressive FoF and Conservative FoF

		Weight Movement			
		Nifty 500 TR Index (50%)*	Nifty 5yr Benchmark G-sec Index (20%)*	^S&P 500 TR Index (INR) (20%)*	Gold (10%)*
Aggressive FoF	Average	50.2%	19.4%	20.9%	9.5%
	Min	38.8%	14.9%	13.8%	6.3%
	Max	61.5%	27.9%	26.0%	15.1%

		Nifty 500 TR Index (30%)*	Nifty 5yr Benchmark G-sec Index (50%)*	^S&P 500 TR Index (INR) (10%)*	Gold (10%)*
Conservative FoF	Average	30.8%	49.1%	10.4%	9.7%
	Min	20.7%	41.5%	6.3%	7.0%
	Max	41.0%	61.2%	15.2%	14.5%

* Indicative weights decided basis MOAMC study, all Performance numbers in this presentation are calculated using following indicative weights. This is for illustration –

- Aggressive FoF – Nifty 500 – (50%), Nifty 5 Yr G-Sec Benchmark (20%), S&P 500 Index (INR) (20%), Gold (10%)
- Conservative FoF – Nifty 500 – (30%), Nifty 5 Yr G-Sec Benchmark (50%), S&P 500 Index (INR) (10%), Gold (10%)

Source/Disclaimer: MOAMC Research. Data from 31-Dec-01 to 31-Mar-21. The above weights are indicative. The actual weights may deviate from indicative weights in short term but will always remain in the asset allocation range stated in SID as per slide no. 8 and 9. The above graph/table is used to explain the concept and is for illustration purpose only and should not be used for development or implementation of an investment strategy. Past performance may or may not be sustained in future

Attributes of Fund

As per Nobel Prize winning economist Harry Markowitz - Diversification is the only free lunch in Finance

Diversified

Combines 4 low correlated asset classes.

Options Per Risk Appetite

Portfolios according to the risk appetite of investors; Aggressive FoF and Conservative FoF

Risk Reduction

Significant reduction of risk in terms of annualized volatility and drawdowns

Tax Efficient

Unlike individual investor, the Mutual Funds don't incur income tax liability during portfolio rebalancing.

Low Cost

All underlying funds are passive funds

Inbuilt Rebalancing

FoF has rule based portfolio rebalancing in place, which helps asset weight stay in line with target asset allocation

Correlation (19 Year)

Correlation	Nifty 500 TR Index	Nifty 5 yr Benchmark G-Sec Index	^S&P 500 TR Index (INR)	Gold (per ounce) in INR
Nifty 500 TR Index	100.0%	12.6%	19.4%	-7.1%
Nifty 5 yr Benchmark G-Sec Index		100.0%	0.2%	-3.4%
^S&P 500 TR Index (INR)			100.0%	-4.3%
Gold (per ounce) in INR				100.0%

Source/Disclaimer: Index values- www.niftyindices.com, MOAMC. Exchange rate- FBIL/RBI/Thomson Reuter. Performance data since 31-Dec-2001 to 31-Mar-2021. All Performance data in INR. S&P 500 Index values adjusted for one day lag movement due to different time zone. Performance results have many inherent limitations and no representation is being made that any investor will, or is likely to achieve. The above table is used to explain the concept and is for illustration purpose only and should not be used for development or implementation of an investment strategy. Past performance may or may not be sustained in future

Correlation: Domestic Equity

Source/Disclaimer: Index values- www.niftyindices.com, MOAMC. Exchange rate- FBIL/RBI/Thomson Reuter. Performance data since 31-Dec-2005 to 31-Dec-2020. All Performance data in INR. Performance results have many inherent limitations and no representation is being made that any investor will, or is likely to achieve. The above graph is used to explain the concept and is for illustration purpose only and should not be used for development or implementation of an investment strategy. Past performance may or may not be sustained in future

Correlation: Multi Asset Class

Diversification makes intuitive sense – when one asset class suffers, it pays to not have all your eggs in one basket

Source/Disclaimer: Index values- www.niftyindices.com, MOAMC. Exchange rate- FBIL/RBI/Thomson Reuter. Performance data since 31-Dec-2005 to 31-Dec-2020. All Performance data in INR. S&P 500 Index values adjusted for one day lag movement due to different time zone. Performance results have many inherent limitations and no representation is being made that any investor will, or is likely to achieve. The above graph is used to explain the concept and is for illustration purpose only and should not be used for development or implementation of an investment strategy. Past performance may or may not be sustained in future

Study: Rebalancing yourself? You may find it taxing

As per the study, by investing in multi asset mutual fund, investor earned 1.3% excess returns as compared to doing it yourself

ASSUMPTIONS & METHODOLOGY:

- Equal Weight Portfolio comprises of Nifty 500, S&P 500, Nifty 5 Year G Sec and Gold.
- Rebalancing takes place every calendar year on the first day of the year
- 30% Short Term Capital Gain tax is assumed for debt, gold and S&P 500
- 10% Long Term Capital Gain is assumed for domestic Equity

Rebalancing for individual investor leads to capital gain tax

Per regulation, Mutual funds are not subject to direct taxes

Taxes on portfolio rebalancing, can eat away your performance

Source/Disclaimer: MOAMC Research, S&P Dow Jones and MOAMC for S&P 500 TRI, www.niftyindices.com for Nifty 500 TRI and 5-yr G-sec, Factset for Gold. All performance data in INR. Data from 31-Jan-2005 to 31-Jan-2021. Hypothetical performance results have many inherent limitations and no representation is being made that any investor will, or is likely to achieve, performance similar to that shown. Underlying Fund Info

	Motilal Oswal Nifty 500 Fund	Motilal Oswal S&P 500 Index Fund	Motilal Oswal 5 Year G-Sec ETF	ICICI Prudential Gold ETF
Investment Objective	The Scheme seeks investment return that corresponds to the performance of Nifty 500 Index subject to tracking error. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.	The Scheme seeks investment return that corresponds to the performance of S&P 500 Index subject to tracking error. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.	The Scheme seeks investment return that closely corresponds (before fees and expenses) total returns of the securities as represented by the Nifty 5 yr Benchmark G-Sec Index (Underlying Index), subject to tracking error. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.	The scheme seeks to provide investment returns that, before expenses, closely track the performance of domestic prices of Gold derived from the LBMA AM fixing prices. However, the performance of the Scheme may differ from that of the underlying gold due to tracking error. There can be no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme is not actively managed. It does not engage in any activities designed to obtain a profit from, or to ameliorate losses caused by, changes in the price of gold.

Glossary

Annualized Returns (CAGR) –

Compound annual growth rate is the rate of return that would be required for an investment to grow from its beginning balance to its ending balance

$$\left[\left(\frac{\text{Ending Value}}{\text{Beginning Value}} \right)^{\frac{1}{\text{No. of Years}}} - 1 \right] \times 100\%$$

Annualized Volatility (Standard Deviation) –

It is a measure of the amount of variation or dispersion of a set of values. A low standard deviation indicates that the values tend to be close to the mean of the set, while a high standard deviation indicates that the values are spread out over a wider range

$$\sigma = \sqrt{\frac{\sum (x_i - \mu)^2}{N}}$$

σ - standard deviation
 \sum - summation
 μ - population mean
 N - population size

Annualized volatility = Standard Deviation * SQRT (250)

Risk Adjusted Returns –

It is used to measure an investment's return by examining how much risk is taken in obtaining the return. Risk-adjusted returns are useful for comparing various individual securities and mutual funds, as well as a portfolio.

$$\text{Risk Adjusted Returns} = \frac{\text{Annualized Returns}_t}{\text{Annualized Volatility}_t}$$

The statements contained herein may include statements of future expectations and other forward-looking statements that are based on our current views and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in such statements. Readers shall be fully responsible / liable for any decision taken on the basis of this presentation. Investments in Securities are subject to market and other risks and there is no assurance or guarantee that the objectives of any of the Schemes will be achieved. The scheme may not be suited to all categories of investors.

The material is based upon information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied upon as such. Opinions, if any, expressed are our opinions as of the date of appearing on this material only. While we endeavor to update on a reasonable basis the information discussed in this material, there may be regulatory, compliance, or other reasons that prevent us from doing so. Recipient shall understand that the aforementioned statements cannot disclose all the risks and characteristics. The recipient is requested to take into consideration all the risk factors including their financial condition, suitability to risk return, etc. and take professional advice before investing.

Risks associated with investing in Equities

Investments in the equity shares of the Companies constituting the Underlying Index are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro-economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.

Passive Investments -

The Fund would invest in the Index/ETF Schemes regardless of investment merit, research, without taking a view of the market and without adopting any defensive measures. The Fund would not select securities in which it wants to invest but is guided by the Underlying Index/ETF Schemes. As such the Scheme is passively managed.

Risk associated with investing in Foreign Securities

The risk of investing in foreign securities carries an exchange rate risks related to depreciation of foreign currency and country risks. The country risks would include events such as change in regulations or political circumstances like introduction of extraordinary exchange rate controls, restrictions on repatriation of capital due to exchange rate controls, bilateral political tensions leading to immobilisation of overseas financial assets and the prevalent tax laws of the respective jurisdiction for the execution of trades or otherwise. The Scheme may invest in the units of overseas mutual fund schemes including exchange traded funds. Hence scheme specific risk factors of such underlying schemes will be applicable. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying schemes.

Risk associated with investing in fixed income securities and Money Market Instruments

The Fund may be exposed to credit risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default. Further, losses can occur in particular for the settlement/delivery of financial instruments. Further, the scheme may be exposed to liquidity or marketability Risk which refers to ease at which a security can be sold at or near its true value.

Risk associated with investments in Gold ETF's:

The scheme would invest in Gold ETFs and thus the NAV of the scheme will react to Gold price movements. Several factors that may affect the price of gold are as follows:

- Global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedge positions, central bank purchases and sales, productions and cost levels in major gold producing countries such as the South Africa, the United States and Australia.
- Investors' expectations with respect to the rate of inflation
- Currency exchange rates
- Interest rates
- Investment and trading activities of hedge funds and commodity funds
- Global or regional political, economic or financial events and situations
- Changes in indirect taxes or any other levies

For detailed risk factors, investors are requested to refer the SID.

Mutual Fund Investments are subject to market risks, read all scheme related documents carefully
