Annexure 1

AMC to choose the applicable provisions based on intended asset allocation				
Equity derivatives of underlying securities forming part of the index may also be available as an investment option in case the underlying security is not available for purchase.	• Calculation of cumulative gross exposure – Pursuant to clause 12.24 of SEBI Master Circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, the cumulative gross exposure through Constituents of Nifty Energy Index and Debt and money market instruments, cash and cash equivalents, derivative positions, other permitted securities/assets and such other securities/assets as may be permitted by the Board from time to time will not exceed 100% of the net assets of the scheme. • Numerical example of risk involved – Using Index Futures to increase percentage investment in equities Derivatives may be used for the purpose of deploying ideal cash and/or pending its investment in equities so as to efficiently replicate the underlying index and reduce tracking error. There may be a time lag between the inflow of funds and their deployment in stocks. If so desired, the scheme would be able to take immediate exposure to equities via index futures. The position in futures may be reversed in a phased manner, as the funds are deployed in the equity markets. Example: The scheme has a corpus of Rs. 100 crore and there is an inflow of Rs. 10 crore in a day. The AMC may buy index futures contracts of a value of Rs. 10 crore. Later as the money is deployed in the underlying equities, the value of the index futures contracts can be suitably reduced.

Risks associated with Investing in Derivatives Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counterparty”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. • Disclosure relating to extent and manner of participation in derivatives to be provided The Scheme may take exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions for a temporary period.
