Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Subject to the Regulations, the asset allocation pattern indicated above for the Scheme may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. In the event that the asset allocation of the Scheme should deviate from the ranges as noted in the asset allocation table above, then the portfolio of the Scheme will be rebalanced by the Fund Manager to the position indicated in the asset allocation table above. Such changes in the asset allocation will be for short term and defensive considerations in accordance with para 1.9.1(b) of SEBI Master Circular on Mutual Funds.

In case of deviation, if any, from the asset allocation pattern, the AMC shall rebalance the portfolio within a period of 7 calendar days in accordance with para 4.5.5 (a) of SEBI Master Circular on Mutual Funds. Where the portfolio is not rebalanced within 7 calendar days, justification for the same shall be placed before the Investment Committee and reasons for the same shall be recorded in writing. The Investment Committee shall then decide on the course of action.

Portfolio rebalancing due to Passive Breach:

In accordance with para 4.5.5 of SEBI Master Circular on Mutual Funds, in case of change in constituents of the index due to periodic review, the portfolio of Index fund shall be rebalanced within 7 calendar days. Any transactions undertaken in the scheme portfolio of Index fund in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.

Additionally, in the event of involuntary corporate action, the scheme shall dispose the security not forming part of the underlying index within 7 days from the date of allotment/ listing.

B. WHERE WILL THE SCHEME INVEST?

The Scheme will invest in Equity and Equity related instruments including derivatives. The Scheme may invest its corpus in debt and Money Market Instruments.

For description of the instruments, please refer section II (A).

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme follows a passive investment strategy and seek to invest in the constituent of BSE Enhanced Value Total Return Index. The scheme aims to achieve returns equivalent to the benchmark subject to tracking error.

The scheme would invest in Constituents of BSE Enhanced Value Index, units of Liquid schemes/ debt schemes, debt and/or money market instruments as stated in the asset allocation table.

Portfolio Turnover

Portfolio Turnover is defined as the lower of sales or purchase divided by the average corpus during a specified period of time. The Scheme, being an open ended Scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. However, it is difficult to measure with reasonable accuracy the likely turnover in the portfolio of the Scheme.

Tracking Error

Tracking error is defined as the standard deviation of the difference between the daily returns of the Underlying Index and the NAV of the Scheme. Theoretically, the corpus of the Scheme has to be fully invested in the securities comprising the Underlying Index in the same proportion of weightage as the securities have in the Underlying Index. However, it is not possible to invest as per the objective due to reason that the Scheme has to incur expenses, corporate actions pertaining to the Index including changes to the constituents, regulatory policies, ability of the Fund Manager to closely replicate the Underlying Index, lack of liquidity, etc. The Scheme's returns may therefore deviate from those of its Underlying Index.

Tracking Error may arise due to the following reasons:

1. Fees and expenses of the Scheme.
2. Cash balance held by the Scheme due to dividend received, subscriptions, redemption, etc.

SID of Motilal Oswal BSE Enhanced Value Index Fund

3. Halt in trading on the stock exchange due to circuit filter rules.
4. Corporate actions
5. The Scheme has to invest in the securities in whole numbers and has to round off the quantity of securities shares.
6. Delay in dividend payout, and withholding tax on dividend.
7. Changes in the constituents of the underlying Index. Whenever there are any changes, the Scheme has to reallocate its investment as per the revised Index but market conditions may not offer an opportunity to rebalance its portfolio to match the Index and such delay may affect the NAV of the Scheme.
8. Lack of Liquidity

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2% p.a.

In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMC, the tracking error may exceed 2% and the same will be intimated to the Trustees with corrective actions taken by the AMC, if any.

Tracking Difference:

Tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Index fund will be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 years, 5 years, 10 years and since the date of allotment of units.

For detailed derivatives strategies, please refer SAI.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked against BSE Enhanced Value Total Return Index. As the Scheme is an Index Scheme and BSE Enhanced Value Total Return Index, is ideal benchmark for this scheme, since the investment objective of the scheme is replicate / track the performance of the index.

Total Return variant of the index (TRI) will be used for performance comparison.

The benchmark shall be in compliance of the aforesaid norms.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV will be calculated up to four decimals.

The NAV shall be calculated and disclosed on each business day. The computation of NAV shall be in conformity with SEBI Regulations and guidelines as prescribed from time to time.

Illustration of NAV:

If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows:

$$10,45,34,345.34 / 10,00,000 = \text{Rs. } 10.4534 \text{ per unit (rounded off to four decimals)}$$

The repurchase price shall not be lower than 97% of the NAV. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc.

Refer to SAI.

The investor is requested to check the prevailing load structure of the Scheme before investing.

Repurchase/ Resale is at Net Asset Value (NAV) related prices with repurchase/ resale loads as applicable (within limits) as specified under SEBI Regulations 2026, While determining the price of the units, the fund will ensure that the repurchase price is not lower than 97 per cent of the Net Asset Value. Bonus units and units issued on reinvestment of IDCWs shall not be subject to entry and exit load. No Load shall be imposed for switching between Options within the Scheme.

Under the Scheme, the AMC reserves the right to modify/alter the load structure if it so deems fit in the interest of smooth and efficient functioning of the scheme, subject to maximum limits as prescribed under the SEBI Regulations. I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION

All references to “Master Circular” refer to Master Circular for Mutual Funds no. HO/24/13/11(1)2026 IMD POD-1/I/7602/2026 issued by SEBI dated March 20, 2026 as amended from time to time

For detailed description please refer <https://www.motilaloswalmf.com/downloads/sid-related-document>

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of para 7.19. of SEBI Master circular on Mutual Funds would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 calendar days’ notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 calendar days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th calendar day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK FACTORS

- **Standard Risk Factors:** Please refer to SAI.
- **Scheme Specific Risk Factors**
The Scheme is subject to the principal risks described below. Some or all of these risks may adversely affect Scheme’s NAV, trading price, yield, return and/or its ability to meet its objectives.
- **Risk associated with Investment in Units of mutual fund**
Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. As the price / value / interest rate of the securities in which the Scheme(s) invests fluctuates, the value of your investment in the Scheme(s) may go up or down depending on the various factors and forces affecting the capital markets and money markets.

- **Risks associated with Investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counterparty”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

- **Risks associated with investing in Equities**

- a. Investments in the equity shares of the Companies constituting the Underlying Index are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro-economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.
- b. The Scheme would invest in the securities comprising the Underlying Index in the same proportion as the securities have in the Index. Hence, the risk associated with the corresponding Underlying Index would be applicable to the Scheme. The Underlying Index has its own criteria and policy for inclusion/exclusion of securities from the Index, its maintenance thereof and effecting corporate actions. The Fund would invest in the securities of the Index regardless of investment merit, research, without taking a view of the market and without adopting any defensive measures. The Fund would not select securities in which it wants to invest but is guided by the Underlying Index. As such the Scheme is not actively managed but is passively managed.
- c. **Risks of Total Return**
Dividends are assumed to be reinvested into the BSE Enhanced Value Index after the ex-dividend date of the constituents. However, in practice, the dividend is received with a lag and after deducting applicable withholding tax, if applicable. This can lead to some tracking error.

- **Market Risk**

The Scheme's NAV will react to stock market movements. The value of investments in the scheme may go down over a short or long period due to fluctuations in Scheme's NAV in response to factors such as performance of companies whose stock comprises the underlying portfolio, economic and political developments, changes in government policies, changes in interest rates, inflation and other monetary factors causing movement in prices of underlying investments.

- **Concentration risk**

This is the risk arising from over exposure to few securities/issuers/sectors.

- **Passive Investments**

The Scheme is not actively managed. Since the Scheme is replicating the underlying index, it may be affected by a general decline in the respective markets relating to its underlying index. The Scheme as per its investment objective invests in Securities which are constituents of its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

- **Right to Limit Redemptions**

The Trustee, in the general interest of the unit holders of the Scheme offered under this SID and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day subject to the guidelines/circulars issued by the Regulatory Authorities from time to time.

For detailed restrictions, please refer to Section II Part D, "Right to Limit Redemptions."

- **Risk Factors relating to Portfolio Rebalancing**

In the event that the asset allocation of the Scheme deviates from the ranges as provided in the asset allocation table in this SID, then the Fund Manager will rebalance the portfolio of the Scheme to the position indicated in the asset allocation table. However, if market conditions do not permit the Fund Manager to rebalance the portfolio of the Scheme then the AMC would notify the Board of the Trustee Company and the Investment Committee of the AMC with appropriate justifications.

- **Index Fund**

The Scheme being an index fund follows a passive investment technique and shall only invest in Securities comprising one selected index as per investment objective of the Scheme. The Fund Manager would invest in the Securities comprising the underlying index irrespective of the market conditions. If the Securities market declines, the value of the investment held by the Scheme shall decrease.

Risks Associated with Debt & Money Market Instruments

Price-Risk or Interest-Rate Risk: Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk

Credit Risk means that the issuer of a security may default on interest payments or even paying back the principal amount on maturity. (i.e. the issuer may be unable to make timely principal and interest payments on the security). Even where no default occurs, the prices of security may go down because the credit rating of an issuer goes down. It must be, however, noted that where the Scheme has invested in Government securities, there is no risk to that extent.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

- **Risks associated with Segregated portfolio:**

The AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event/actual default at issuer level. Accordingly, Investor holding units of segregated portfolio may not

able to liquidate their holding till the time recovery of money from the issuer. The Security comprised of segregated portfolio may not realise any value. Further, Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

- **Risks associated with investing in TREPS Segments**

The mutual fund is a member of securities and TREPS segments of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in TREPS segments are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time. In the event that the default waterfall is triggered and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund allocated to the scheme on a pro-rata basis.

- **Risks associated with Securities Lending**

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

In case the Scheme undertakes stock lending as prescribed in the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities lent. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Tracking Error Risk**

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance and changes to the underlying index and regulatory restrictions, lack of liquidity which may result in Tracking Error. Hence it may affect AMC's ability to achieve close correlation with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible. There can be no assurance or guarantee that the Scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index.

- **Risk associated with Investment in Units of mutual fund**

Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. As the price / value / interest rate of the securities in which the Scheme(s) invests fluctuates, the value of your investment in the Scheme(s) may go up or down depending on the various factors and forces affecting the capital markets and money markets.

- **Trading through mutual fund trading platforms of BSE and/ or NSE**

In respect of transaction in Units of the Scheme through BSE and/ or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/ or NSE and their respective clearing corporations on which the Mutual Fund has no control.

Risk Control

Risk is an inherent part of the investment function. Effective Risk management is critical to fund management for achieving financial soundness. Investment by the Scheme would be made as per the investment objective of the Scheme and in accordance with SEBI Regulations. AMC has adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep in line with the investment objective of the Scheme. The risk control process would include identifying the risk and taking proper measures for the same. The system has incorporated all the investment restrictions as per the SEBI guidelines and enables identifying and measuring the risk through various risk management tools like various portfolio analytics, risk ratios, average duration and analyses the same and acts in a preventive manner.

D. Risk Mitigation Strategies:

Risk and Description	Risk mitigates / management strategy
<u>Risks associated with Equity investment</u>	
<u>Market Risk</u> The Scheme is vulnerable to movements in the prices of securities invested by the Scheme, which could have a material bearing on the overall returns from the Scheme. The value of the underlying Scheme investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all	Market risk is inherent to an equity scheme. Being a passively managed scheme, it will invest in the securities included in its Underlying Index

sectors including equity and debt markets.	
<u>Liquidity risk</u> The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which they invests.	The Scheme will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
<u>Tracking Error risk (Volatility/ Concentration risk):</u> The performance of the Scheme may not commensurate with the performance of the underlying Index viz. BSE Enhanced Value Total Return Index on any given day or over any given period.	<u>Tracking Error risk (Volatility/ Concentration risk):</u> Over a short to medium period, the Scheme may carry the risk of variance between portfolio composition and Benchmark. The objectives of the scheme are too closely track the performance of the Underlying Index over the same period, subject to tracking error. The Scheme would endeavor to maintain a low tracking error by actively aligning the portfolio in line with the Index.
<u>Derivatives Risk</u> As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds.	Derivatives will be used in the form of Index Options, Index Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. The AMC monitors the portfolio and regulatory limits for derivatives through its front office monitoring system. Exposure to derivatives of stocks or underlying index will be done based on requisite research. Exposure with respect to derivatives shall be in line with regulatory limits and the limits specified in the SID. No OTC contracts will be entered into.
Risks associated with money market investment	

<u>Market Risk/ Interest Rate Risk</u> As with all fixed income securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The Scheme may invest in money market instruments having relatively shorter maturity thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities.
<u>Liquidity or Marketability Risk</u> This refers to the ease with which a security can be sold at or near to its valuation yield- to maturity (YTM).	The Scheme may invest in money market instruments having relatively shorter maturity. While the liquidity risk for short maturity securities may be low, it may be high in case of medium to long maturity securities.
<u>Credit Risk</u> Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).	Management analysis may be used for identifying company specific risks. Management's past track record may also be studied.
