		<u>For Dividend Option:</u>			
Under this option, dividends will be declared (subject to deduction of tax at source and statutory levies, if any) at periodic intervals at the discretion of the Trustees, subject to availability of distributable surplus. On payment of dividend, the NAV of the Units under dividend option will fall to the extent of the dividend payout and applicable statutory levies, if any. All the dividend payments shall be in accordance and compliance with SEBI Regulations, as applicable from time to time. It should, however, be noted that actual declaration of dividends will depend, inter-alia, on the availability of distributable surplus and will be entirely at the discretion of the Trustees. Following facilities are available under this Option:					
Plan	Options	Sub-Options	Frequency	Record date	
Regular and Direct	Dividend	Dividend Reinvestment	Daily	Every business day

The Units for the purpose of re-investment will be created and credited to the Unit holder's account at the applicable NAV announced immediately following the record date. There shall, however, be no load on the dividends so reinvested.
- Dividend Payout option**

Dividends, if declared, will be paid (subject to deduction of dividend distribution tax and statutory levy, if any) to those Unit holders, whose names appear in the register of Unit holders on the notified record date. AMC reserves the right to decide the record date from time to time. However, it must be distinctly understood that actual declaration of dividends is at the discretion of the Board of Trustees. There is no assurance or guarantee to Unit holders as to the rate of dividend distribution nor that the dividends will be declared regularly, though it is the intention of the Mutual Fund to make regular dividend distribution under the Dividend Plan. XVII.	Segregated portfolio/side pocketing disclosure	In terms of para 5.5 of SEBI Master Circular on Mutual Funds, has advised that portfolios by mutual fund schemes investing in debt and money market instruments should have provision in the concerned SID for creating portfolio segregation with a view to, 1) Reducing Sharp fall in NAV of Schemes. 2) Reducing Redemption pressure & liquidity risk. 3) Safeguarding good quality papers & creating confidence in market, and 4) Mitigating reputational risk. 5) Accordingly, this policy is being laid down to comply with the SEBI instructions. Segregated Portfolio: The portfolio comprising of debt and money market instruments, which might be affected by a credit event and shall also include the unrated debt or money market instruments affected by actual default. Main Portfolio: Scheme portfolio excluding segregated portfolio Total Portfolio: Scheme portfolio including the securities affected by credit events The AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event/actual default at issuer level. Accordingly, Investor holding units of segregated portfolio may not

		able to liquidate their holding till the time recovery of money from the issuer. The Security comprised of segregated portfolio may not realise any value. Further, listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV. For further details, kindly refer SAI.
XVIII	Swing pricing disclosure	Swing pricing refers to a process for adjusting a scheme's Net Asset Value (NAV) to effectively pass on transaction costs stemming from significant net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity. It is aimed at reducing the impact of large redemptions on existing investors by reducing dilution of the value of a fund's units. Applicable on schemes Circumstances when Swing Pricing Triggered In a liquidity-challenged environment, quoted bid/ask spreads and overall trading cost can widen and may not be representative of the executed prices that can be achieved in the market. Swing pricing is needed to address issues in addition to costs of bid-offer spread and transaction costs, particularly arising during market dislocation in the mutual fund industry or in the underlying bond market. Further, liquidity is concentrated in high quality paper and during market dislocation, very high-risk aversion is observed and in terms of yield of bonds, spread over benchmark spike, particularly for relatively lower quality paper. Accordingly, swing pricing, an anti-dilution adjustment that seeks to protect investors in a fund from performance dilution as a result of significant outflows from the fund, particularly during market dislocation. The Scheme has enabling provision to trigger swing pricing under certain circumstances. For Details, kindly refer SAI

For detailed information about where will the scheme invest, kindly refer Section II.

C. WHAT ARE THE INVESTMENT STRATEGIES

The Fund Management team will endeavour to maintain a consistent performance in the scheme, giving utmost importance to safety & liquidity of the investments. The fund manager will try to achieve an optimal risk return balance for management of the portfolio. The investments in money market instruments carry various risks like interest rate risk, liquidity risk, default risk, purchasing power risk etc. While they cannot be done away with, efforts will be made to minimize the volatility by diversification and effective use of hedging techniques. The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets.

Portfolio Turnover

Portfolio Turnover is defined as the lower of sales or purchase divided by the average corpus during a specified period of time. Generally, Portfolio Turnover would depend upon the rebalancing of the portfolio due to change in composition of the Index or due to corporate actions of the securities constituting the Index.

Securities Lending

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

The Scheme may lend securities from its portfolio in accordance with para 13.6 of SEBI Master Circular on Mutual Funds as may be amended from time to time. The AMC/Fund shall also adhere to guidelines issued under Securities Lending Scheme, 1997. Securities' lending shall enable the Scheme to earn income that may partially offset its expenses and thereby reduce the effect these expenses have on the Scheme's ability to provide investment returns that correspond generally to the performance of its Basket. The Scheme will pay reasonable administrative and custodial fees in connection with the lending of securities. The Scheme will be exposed to the risk of loss should a borrower default on its obligation to return the borrowed securities. The Scheme share of income from the lending collateral will be included in the Scheme's gross income. The Fund will comply with the conditions for securities lending specified by SEBI Regulations and circulars. The Scheme will not lend more than 20% of its corpus and will not exceed more than 5% through a single intermediary.

Short Selling

Short-selling is the sale of shares or securities that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock/security he shorted and returns the stock/security to the lender to close out the loan.

Contribution in Corporate Debt Market Fund

Further, an incremental contribution to CDMDF shall be made every six months within 10 working days from the end of half year to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF. However, in case of winding up of contributing Scheme, inter-scheme transfers within the same Mutual Fund or across Mutual Funds may be undertaken. Further, investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked against CRISIL Liquid Fund A-I Total Return Index.

CRISIL Liquid Fund A-I Index seeks to track the performance of a debt portfolio that includes TREPS, Commercial Papers and Certificates of Deposit.

The composition of the aforesaid benchmark is such that, they are most suited for comparing performance of the respective plans. It's a Total Return Index seeking to capture coupon and price returns of the underlying portfolio. It is most suited for comparing the scheme's performance. Hence it is an appropriate benchmark for the Scheme.

The AMC/Trustee reserves the right to change the benchmark for evaluation of performance of the Scheme from time to time in conformity with investment objective of the Scheme and appropriateness of the benchmark, subject to SEBI Regulations and other prevailing guidelines, if any. Total Return variant of the index (TRI) will be used for performance comparison.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Asset Value (NAV) of the units under the Scheme shall be calculated as follows:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV will be calculated up to four decimals.

The NAV Calculation shall be in accordance with SEBI MF Regulations and is available on the mutual fund website www.motilaloswalmf.com. The NAV shall be calculated and disclosed on each business day on AMFI's website www.amfiindia.com, by 11.00 p.m. and also on www.motilaloswalmf.com. This will enable the disclosure of the NAV of the Scheme before the deadline as provided by SEBI guidelines.

Illustration of NAV:

If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows:

$$10,45,34,345.34 / 10,00,000 = \text{Rs. } 10.4534 \text{ per unit (rounded off to four decimals)}$$

Repurchase/ Resale is at Net Asset Value (NAV) related prices with repurchase/ resale loads as applicable (within limits) as specified under SEBI Regulations 2026, While determining the price of the units, the fund will ensure that the repurchase price is not lower than 97 % of the Net Asset Value.

SECTION II

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION

All references to “Master Circular” refer to Master Circular for Mutual Funds no. HO/24/13/11(1)2026-IMD-POD-1/I/7602/2026 issued by SEBI dated March 20, 2026 as amended from time to time

For detailed description please refer <https://www.motilaloswalmf.com/downloads/sid-related-documents>

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the para 7.19 of SEBI Master Circular on Mutual Funds would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days’ notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK FACTORS

Scheme Specific Risk Factors

The Scheme is subject to the principal risks described below. Some or all of these risks may adversely affect Scheme’s NAV, yield, return and/or its ability to meet its objectives.

- **Market Risk**

The Scheme’s NAV will react to the interest rate movements. The Investor may lose money over short or long period due to fluctuation in Scheme’s NAV in response to factors such as economic and political developments, changes in interest rates, inflation and other monetary factors and also movement in prices of underlining investments.

- **Regulatory Risk**

Any changes in trading regulations by NSE or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.

- **Asset Class Risk**

The returns from the types of securities in which the Scheme invests may under perform from the various general securities markets or different asset classes. Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Different types of securities tend to go through cycles of out-

performance and under-performance in comparison with the general securities markets. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern.

- **Interest Rate Risk**

Changes in interest rates will affect the Scheme's Net Asset Value. The prices of securities usually increase as interest rates decline and usually decrease as interest rates rise. The extent of fall or rise in the prices is guided by modified duration, which is a function of the existing coupon, days to maturity and increase or decrease in the level of interest rate. The new level of interest rate is determined by the rate at which the government raises new money and/or the price levels at which the market is already dealing in existing securities. Prices of long-term securities generally fluctuate more in response to interest rate changes than short-term securities. The price risk is low in the case of the floating rate or inflation-linked bonds. The price risk does not exist if the investment is made under a repo agreement. Debt markets, especially in developing markets like India, can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

Modified Duration is a measure of price sensitivity, the change in the value of investment to a 1% change in the yield of the investment.

- **Reinvestment Risk**

Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

- **Pre-payment Risk**

Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

- **Spread Risk**

In a floating rate security, the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

- **Settlement Risk**

Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well-developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.

- **Credit Risk**

Credit Risk means that the issuer of a security may default on interest payments or even paying back the principal amount on maturity. (i.e. the issuer may be unable to make timely principal and interest payments on the security).

Even where no default occurs, the prices of security may go down because the credit rating of an issuer goes down. It must be, however, noted that where the Scheme has invested in Government securities, there is no risk to that extent.

- **Liquidity or Marketability Risk**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. Trading Volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such period may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. As liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Fund for redemption of units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme.

- **Risks associated with Segregated portfolio**

The AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event/actual default at issuer level. Accordingly, Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. The Security comprised of segregated portfolio may not realise any value. Further, listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

- **Risk factors associated with Securities Lending**

Stock Lending is a lending of securities through an SEBI approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

In case the Scheme undertakes stock lending as prescribed in the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities lent. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Risks associated with short selling**

Scheme may enter into short selling transactions, subject to SEBI and RBI regulations in the matter. This will be done if the fund management team is of the view that there exists an opportunity to make trading gains. Calls for short selling will be taken after considering the liquidity, price movement & volatility of the security by the fund management team. There can be a loss in such a transaction if the price of the security goes up instead of falling down.

- **Trading through mutual fund trading platforms of BSE and/ or NSE**

In respect of transaction in Units of the Scheme through BSE and/ or NSE, allotment and redemption of Units on

any Business Day will depend upon the order processing/settlement by BSE and/ or NSE and their respective clearing corporations on which the Mutual Fund has no control.

- **Liquidity Risk**

As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.

- **Risk associated with investing in fixed income securities and Money Market Instruments**

- a. **Credit risk:** Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debenture are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.
- b. **Counterparty risk:** Counterparty refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments.
- c. **Interest Rate risk:** This risk is associated with movements in interest rate depends on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.
- d. **Reinvestment risk:** This risk arises from uncertainty in the rate at which cash flows from the securities may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
- e. **Liquidity or Marketability Risk:** This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.
- f. Different types of fixed income securities in which the Scheme would invest carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- g. The Net Asset Value (NAV) of the Scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- h. **Settlement Risk:**

Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well-developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.

- **Risks associated with investing in Government of India Securities**

- a. Market Liquidity risk with fixed rate Government of India Securities even though the Government of India Securities market is more liquid compared to other debt instruments, on certain occasions, there could be difficulties in transacting in the market due to extreme volatility leading to constriction in market volumes. Also, the liquidity of the Scheme may suffer in case the relevant guidelines issued by Reserve Bank of India undergo any adverse changes.
- b. Interest Rate risk associated with Government of India Securities - while Government of India Securities generally carry relatively minimal credit risk since they are issued by the Government of India, they do carry price risk depending upon the general level of interest rates prevailing from time to time. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates decline, the prices of fixed income securities increase. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in the level of interest rates. The price-risk is not unique to Government of India Securities. It exists for all fixed income securities. Therefore, their prices tend to be influenced more by movement in interest rates in the financial system than by changes in the government's credit rating. By contrast, in the case of corporate or institutional fixed income Securities, such as bonds or debentures, prices are influenced by their respective credit standing as well as the general level of interest rates.

- **Risks associated with investing in TREPS Segments**

The mutual fund is a member of securities and TREPS segments of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in TREPS segments are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time. In the event that the default waterfall is triggered and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund allocated to the scheme on a pro-rata basis.

- **Risk associated with investing in Repo of Corporate Bond Securities**

To the extent the scheme invests in Repo of Corporate Bond Securities, the scheme will be subject to following risks:

Corporate Bond Repo will be subject to counter party risk.

The Scheme will be exposed to credit risk on the underlying collateral– downward migration of rating. The scheme may impose adequate haircut on the collateral to cushion against any diminution in the value of the collateral. Collateral will require to be rated AA and above rated where potential for downgrade/default is low. In addition, appropriate haircuts are applied on the market value of the underlying securities to adjust for the illiquidity and interest rate risk on the underlying instrument.

Liquidity of collateral: In the event of default by the counterparty, the scheme would have recourse to recover its investments by selling the collateral in the market. If the underlying collateral is illiquid, then the Mutual Fund may incur an impact cost at the time of sale (lower price realization).

- **Risk associated with potential change in Tax structure**

This summary of tax implications given in the taxation section (Units and Offer Section III) is based on the current provisions of the applicable tax laws. This information is provided for general purpose only. The current taxation laws may change due to change in the 'Income Tax Act 1961' or any subsequent changes/amendments in Finance Act/Rules/Regulations. Any change may entail a higher outgo to the scheme or to the investors by way of securities transaction taxes, fees, taxes etc. thus adversely impacting the scheme and its returns.

- **Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF)**

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instil confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation. In accordance with the requirement of regulation 40 of SEBI (Mutual Funds) Regulations, 2026 read with chapter 18 of SEBI Master Circular on Mutual Funds on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF. We would further like to bring to the notice of the investors that investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

Risk Control

Risk is an inherent part of the investment function. Effective Risk management is critical to fund management for achieving financial soundness. Investment by the Scheme would be made as per the investment objective of the Scheme and in accordance with SEBI Regulations. AMC has adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep in line with the investment objective of the Scheme. The risk control process would include identifying the risk and taking proper measures for the same. The system has incorporated all the investment restrictions as per the SEBI guidelines and enables identifying and measuring the risk through various risk management tools like various portfolio analytics, risk ratios, average duration and analyses the same and acts in a preventive manner.

D. Risk mitigation strategies

<u>Liquidity risk</u> The liquidity of the Scheme's investments is inherently restricted by trading volumes in the	The Scheme will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the

securities in which they invests.	underlying stocks.
<u>Derivatives Risk</u> As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds.	Derivatives will be used in the form of Index Options, Index Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. The AMC monitors the portfolio and regulatory limits for derivatives through its front office monitoring system. Exposure to derivatives of stocks or underlying index will be done based on requisite research. Exposure with respect to derivatives shall be in line with regulatory limits and the limits specified in the SID. No OTC contracts will be entered into.
Risks associated with money market investment	
<u>Market Risk/ Interest Rate Risk</u> As with all fixed income securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The Scheme may invest in money market instruments having relatively shorter maturity thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities.
<u>Liquidity or Marketability Risk</u> This refers to the ease with which a security can be sold at or near to its valuation yield- to maturity (YTM).	The Scheme may invest in money market instruments having relatively shorter maturity. While the liquidity risk for short maturity securities may be low, it may be high in case of medium to long maturity securities.
<u>Credit Risk</u> Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).	Management analysis may be used for identifying company specific risks. Management's past track record may also be studied.

Subject to SEBI Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentage stated above are only indicative and not absolute. These proportions may vary substantially depending upon the perception of the AMC, the intention being all the times to seek to protect the interest of the unit holders. Such changes in the investment pattern will be for short term and for defensive considerations only and fund manager will rebalance the portfolio within 30 calendar days from the date of deviation.

The AMC retains the flexibility to invest across all the securities/instruments in money market. The flexibility is being retained to adjust the portfolio in response to a change in the risk-return equation for asset classes under investment, with view to maintain risk within manageable limits.

Debt and Money Markets in India

The instruments available in Indian Debt Market are classified into two categories, namely Government and Non - Government debt. The following instruments are available in these categories:

A] Government Debt	
• Central Government Debt	• State Government Loans
• Zero Coupon Bonds	State Developmental Loans
• Treasury Bills	• Coupon Bearing Bonds
• State Government Debt	• Floating Rate Bonds
• Dated Government Securities	• Coupon Bearing Bonds
B] Non-Government Debt	
• Instruments issued by Government Agencies and other Statutory Bodies	• Government Guaranteed Bonds

• Certificates of Deposit	• Fixed Coupon Debentures
• Promissory Notes	• Pass through Securities
• Commercial Paper	• Zero Coupon Debentures

Activity in the Primary and Secondary Market is dominated by Central Government Securities including Treasury Bills. These instruments comprise close to 50% of all outstanding debt and close to 75% of the daily trading volume on the Wholesale Debt Market Segment of the National Stock Exchange of India Limited.

In the money market, activity levels of the Government and Non-Government Debt vary from time to time. Instruments that comprise a major portion of money market activity include but are not limited to,

- Tri-party Repo on Government securities or treasury bills
- Treasury Bills
- Government Securities with a residual maturity of < 1 year
- Commercial Paper

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing on March 31, 2026 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy.

INSTRUMENT	Current Yield (% PA)
Interbank Call Money	4.99%
91 Day Treasury Bill	5.40%
182 Day Treasury Bill	5.51%
A1+ Commercial Paper	7.60%
5 Year Government of India Security	6.75%
10 Year Government of India Security	7.13%
1 Year Corporate AAA	7.42%
3 Year Corporate AAA	7.50%

Source: CCIL & Bloomberg

Generally, for instruments issued by a non-Government entity (corporate/PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on various factors including the credit rating of the entity

B. INVESTMENT RESTRICTIONS
